## Personal Information

## Profile Summary

As a Full Stack Developer with 2 years of IT experience, I have been involved in the development and implementation of web-based applications. I have hands-on experience in JavaScript, Java, HTML, CSS, ReactJS, and Rest API implementation. I have also worked with MySQL Server and have domain knowledge in building web-based applications. I have a good understanding of the Software Development Life Cycle and have strong problem-solving abilities. I have worked on an AI-based solution product for a client, developing responsive and user-friendly web applications using HTML, CSS, Bootstrap, JavaScript, and React JS. I have also worked on a health insurance portal, developing products as per the technical design document and providing status updates on scrum calls.

## Projects

**3 Months**

### Health insurance management

Health Portal is a web-based application for offering the various insurance claims to & expense tracking, invoices, billing, project management, user management targeted primarily for SMEs such as Legal firms, Creative Agencies etc. It comes with a flexible subscription-based model having different plans for catering different users and their needs. Portal allows firms or freelancers to have a one stop solution for all their billing, client, and project management activities. It provides access based on different user-roles such as administrator, project managers, standard users etc. with personalized dashboard view. Further, this is also extended to firm's clients Portal where only relevant content and features are exposed to firm clients under Client Portal.

Responsibilities:

Develop the Product as per Technical Design Document.

Providing status update on Scrum call

Peer code review and incorporate the review comments into code.

Working with Business Analysts on test results
